

HCA Tech Note 127

Configuring HCA to receive email

In addition to the tools described in the user guide for sending email and SMS messages, you can also configure HCA receive email as well.

It is recommended that you create a new email account for this, and we recommend Gmail as we have had no problems with it. But if you are willing to experiment with all the settings, it may be possible for you to retrieve email from other mail servers as well but it's up to you to figure out what settings are needed.

If you do go with Gmail, it would be an excellent idea to create a new account for only HCA to use. That way all these security options don't impact your personal email. And it will also keep the number of messages in its inbox to just those intended for HCA.

NOTE: From here on in this note, we will discuss configuring a Gmail account to allow 3rd party access. In the later section when discussing how to configure the HCA side, more information on other email providers is discussed.

HCA Tech Note 127

Configuring Gmail

The first thing to do is to configure this new Gmail account so that HCA can access it outside of the normal Gmail clients. This must be done from a browser when logged into this new Google account.

Step 1. Make sure that you are connected to this “only for HCA” Google account and then open Gmail from a browser and click on the Settings icon.

NOTE: Google can't seem to prevent its developers from changing stuff all the time so these images may not match exactly what you see but the concept of what you need to do is the same.

HCA Tech Note 127

On the *Forwarding and POP/IMAP* tab, select the “Enable POP for all mail” option

Settings

General Labels Inbox Accounts and Import Filters and Blocked Addresses **Forwarding and POP/IMAP**

Forwarding:
[Learn more](#)

Tip: You can also forward only some of your mail by [creating a filter!](#)

POP download: [Learn more](#)

1. Status: POP is disabled

Enable POP for all mail 

Enable POP for mail that arrives from now on

2. When messages are accessed with POP

3. Configure your email client (e.g. Outlook, Eudora, Netscape Mail)
[Configuration instructions](#)

IMAP access: (access Gmail from other clients using IMAP) [Learn more](#)

Status: IMAP is disabled

Enable IMAP

Disable IMAP

Configure your email client (e.g. Outlook, Thunderbird, iPhone)
[Configuration instructions](#)

Click on the Save Changes button. If you happen to go back to this settings tab again, the Status shows “POP is enabled”

Follow the link for “Less secure apps”

Less secure app access

To protect your account, apps and devices that use less secure sign-in technology are blocked. [Learn more](#)

Off

[Turn on access \(not recommended\)](#) 

A confirmation page opens and then click on the option slider to enable.

← Less secure app access

Some apps and devices use less secure sign-in technology, which makes your account more vulnerable. You can **turn off** access for these apps, which we recommend, or **turn on** access if you want to use them despite the risks. [Learn more](#)

Allow less secure apps: OFF 

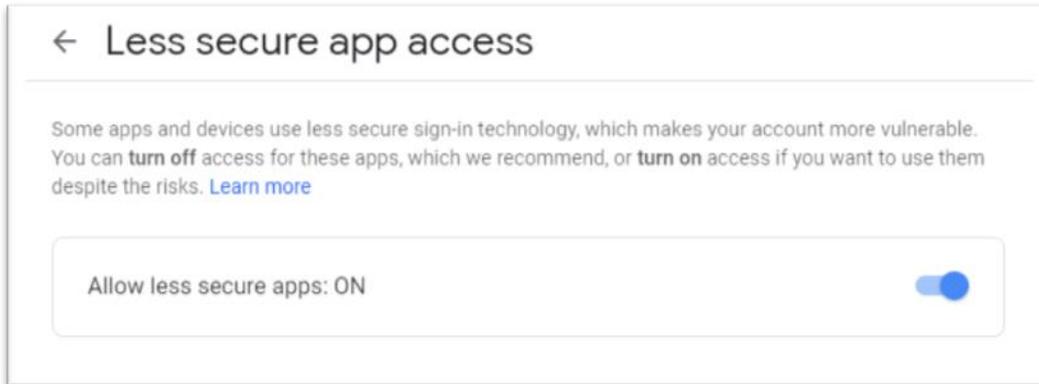

TechSup@HCATech.com

www.homecontrolassistant.com

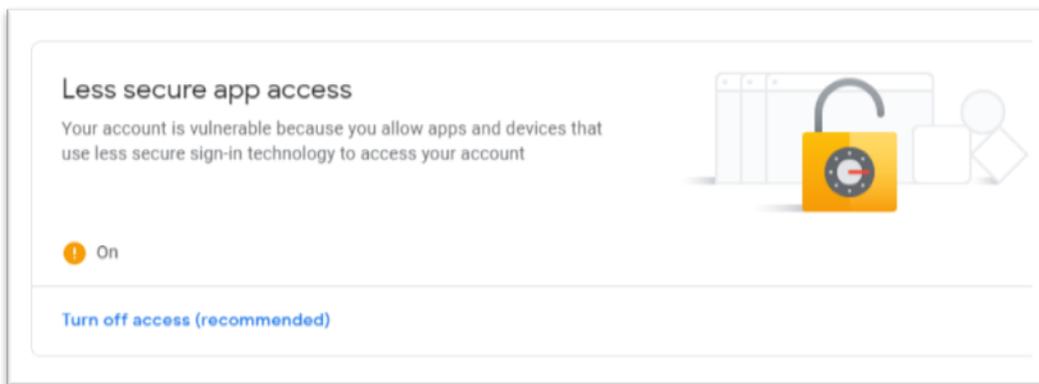

HCA Tech Note 127

When you click on the option the slider goes to the right and shows enabled.

If you go back to this security page again, the option shows as:

HCA Tech Note 127

You will also receive several messages from Google about all this as in its view, these changes are a bit less secure. And if you don't configure all this before HCA starts trying to access your account, then you may see things like this:

! Critical security alert

A suspicious app was blocked from accessing your account

K kharmshca@gmail.com

Google prevented someone from signing in to your account using a non-Google app. If this wasn't you, they know your password and you should change it immediately.

- ?** Unrecognized device
- 🕒** 5 minutes ago
- 📍** Near Seattle, WA, USA
24.35.89.103 (IP address) **i**

Were you recently prevented from signing in to your Google Account?

✗ No, secure account **✓ Yes**

Just click on “Yes”, as you don't want it to secure the account. Now go back though all the steps and check that you have all the options set as needed.

HCA Tech Note 127

Configuring HCA

Next, configure HCA. Use the “Email Background Receive” button in the Tools ribbon category.

These are the settings for Gmail. If you are using Gmail, configure like this, using your username and password of course. Make sure that the *Port*, *Secure checkbox*, and *Authentication type* are exactly as in this image if you are using Gmail.

POP3 Server

Server Name: Port: Connection is secure using SSL / TLS

Authentication Type:

Username: Password:

Check for new messages every minutes Show Password Create receive log Append to receive log

Program to execute on mail retrieval: Attempt to delete message after processing. May not work with all email systems.

The selected program is supplied 4 parameters:

- P1: 0 if successful or error code if problem
- P2: From address if successful or error text if problem
- P3: Subject
- P4: Message body

If you tick the “Create receive log” box, it creates a file called “HCAMailRcv_mmdd.log” in the Logs sub-folder of the HCA documents area, where mm is the month and dd is the day. This would be the place to go to help resolve email problems.

If you are working with a non-Gmail server then the proper settings are up to you to discover. They probably are like those used when you configure HCA to send email. But each ISP is different, and you will just have to see what works.

HCA Tech Note 127

The program that is started when email is received must have four parameters specified like this:

Parameters			
Count: <input type="text" value="4"/>			
	Name	Type	Default for value parameter if not supplied by calling program
Parameter 1:	<input type="text" value="status"/>	<input type="text" value="Value"/>	<input type="text"/> <input type="button" value="Add info"/>
Parameter 2:	<input type="text" value="fromAddress"/>	<input type="text" value="Value"/>	<input type="text"/> <input type="button" value="Add info"/>
Parameter 3:	<input type="text" value="subject"/>	<input type="text" value="Value"/>	<input type="text"/> <input type="button" value="Add info"/>
Parameter 4:	<input type="text" value="body"/>	<input type="text" value="Value"/>	<input type="text"/> <input type="button" value="Add info"/>

A few notes:

1. Each time HCA goes to the inbox it invokes the program for each new email it finds.
2. If using a Gmail account (and possibly others as well), HCA can't delete the email after processing, so you may have to go in occasionally and clear out all the messages before you account runs out of space. If working with Gmail, the browser interface – not the app – lets you do bulk deletes.
3. This system handles HTML messages by supplying to the program the “plain text” version that is supposed to be with each HTML message but no guarantees that it is there or how well it is formatted.
4. If using a Gmail account, if you were to access your account outside of HCA (for example, using the Gmail app or browser interface), any new messages will become non-new messages when HCA next looks for new messages. Just the way it works.
5. If the inbox is successfully accessed but there are no new messages in the inbox, the handler program is not started.
6. If there is a problem in accessing the mailbox, the program is invoked and provides an error code and error text as arguments 1 and 2. Your program should check these arguments and handle the error possibly by creating a log entry.

HCA Tech Note 127

ONE BIG GIANT NOTE:

As you can imagine, getting 3rd party non-email client configuration for access to email for sending and receiving, regardless of who runs the mail server, can be difficult. While we have tested with others but still recommend Gmail as we are certain of its setup. If you use another ISP, as we said before, you are on your own on as to what options to choose.

##end##
